NEXORA دوك حرش

دليل شامل يشرح المنطق، ثم يعرض الكود الكامل للملفات المهمة

وقاعدة البيانات وتسجيل الدخول والشراء ولوحة الإدارة والتوصيات، مع ملحق يحتوي الشيفرة الكاملة للملفات البرمجية.
شرح عملي لمسار الصفحات

إعداد مبني على نسخة المشروع الحالية

عند تسجيل الدخول أو الشراء أو فحص توافق القطع. التركيز على المنطق والأجزاء المهمة، وليس على شكل مجلدات المشروع.
يشرح ماذا يفعل الكود أثناء تشغيل الموقع: كيف يستقبل الصفحة الطلب، وكيف يقرأ ويكتب في قاعدة البيانات، وماذا يحدث
هذا الدليل

الشرح مبني على الملفات الموجودة حاليًا في المشروع. بعض الميزات تعتمد على إعداد محلي مثل مفتاح Geminiأو جدول مواصفات المنتجات.
ملاحظة:

1.كيف يصل طلب الصفحة إلى الكود؟

معظم روابط الموقع تمر من خلال .View/Layout/routing.phpالرابط مثل:

```
View/Layout/routing.php?page=products&category=4
```

يبحث عنها في قائمة مسموح بها، ثم يحمّل ملف الصفحة المناسب. هذا يمنع تمرير اسم ملف عشوائي من عنوان الرابط.
قيمة pageتحدد الصفحة. الموجّه

مثال مبسط من الموجّه:

```
$routes = [
    'home' => __DIR__ . '/../Pages/home.php',
    'products' => __DIR__ . '/../Pages/products.php',
    'cart' => __DIR__ . '/../Pages/cart.php',
    'recommendation' => __DIR__ . '/../Pages/recommendation.php',
];

$page = $_GET['page'] ?? 'home';
if (!isset($routes[$page])) abort(404);
require $routes[$page];
```

الإدارة تحتاج جلسة فيها admin_idوالدور .adminصفحة الحساب تتطلب عميلًا مسجلًا، وإذا كان الحساب معطّلًا تُنهى جلسته.
قبل تحميل الصفحة، الموجّه يفحص بعض الصلاحيات. صفحات

الفكرة: الرابط لا يحتوي اسم ملف PHP؛ يحتوي اسم صفحة معروفًا، والموجّه يقرر أي كود ينفّذ.

الملف: routing.php

2.الاتصال بقاعدة البيانات والاستعلامات

الكلاس Dbفي DBconnection.phpيفتح اتصال PDOمع ،MySQLويعطي بقية المشروع دالة موحدة للاستعلام:

```
$stmt = $db->run_query(
    'SELECT id, name FROM products WHERE id = :id',
    ['id' => $productId]
);
$product = $stmt->fetch();
```

المستخدم داخل نص SQLمباشرة. PDO::ERRMODE_EXCEPTIONيجعل أخطاء قاعدة البيانات تظهر كاستثناءات يمكن التقاطها.
()run_queryيحضّر الاستعلام ثم يرسل القيم منفصلة عنه. بهذه الطريقة لا نركّب قيمة

لعمليات تتكوّن من عدة تغييرات مترابطة، يوفر Dbدوال المعاملة:

```
$db->beginTransaction();
//
$db->commit();
```

إذا فشلت العملية، يستخدم الكود ()rollBackلإلغاء التغييرات غير المكتملة.

3.صفحة المنتجات: من الفلاتر إلى بطاقة المنتج

عند فتح صفحة المنتجات:

والصفحات. 4.الـ Repositoryيبني شروط SQLويرجع المنتجات الفعّالة للعرض. 5.ملف products.phpيعرض البيانات كبطاقات.
Controllerيقرأ البحث والتصنيف والسعر والترتيب ورقم الصفحة من الرابط. 3.يتحقق من القيم، ثم يحسب عدد النتائج
1.الموجّه ينشئ CatalogRepository ثم 2. CatalogControllerالـ

مثال على قراءة قيمة بحث بشكل آمن ومحدود:

```
$rawSearch = $_GET['q'] ?? '';
```

```
$search = is_string($rawSearch) ? trim($rawSearch) : '';
if (strlen($search) > 150) $search = '';
```

الـ URepository يضع نص البحث داخل SQLمباشرة؛ يستخدم placeholder:

```
$conditions[] = 'p.name LIKE :search';
$params['search'] = '%' . $search . '%';
```

الترتيب محصور بقائمة قيم معروفة مثل price_ascوname_desc؛ ثم يستعمل LIMITوOFFSETلتقسيم النتائج إلى صفحات.

صورة المنتج تأتي من جدول product_images، عبر استعلام فرعي يختار أول صورة للمنتج:

```
SELECT pi.image
FROM product_images AS pi
WHERE pi.product_id = p.id
ORDER BY pi.id ASC
LIMIT 1
```

بعدها يتحقق ملف الصفحة من مسار الصورة قبل تكوين رابط العرض. إذا لم توجد صورة صالحة، يعرض رمزًا بديلًا.

الملفات: products.php، CatalogRepository.php، CatalogController.php

4.تفاصيل المنتج، السلة، المفضلة والتقييم

رقم المنتج من id، ثم تجلب تفاصيله وتصنيفه وصوره وتقييماته. عند إرسال نموذج، تحدد قيمة actionماذا سيحدث:
صفحة product.phpتقرأ

من تسجيل العميل والتقييم والنص، ثم تحفظ التقييم أو تحدّثه. - :delete_reviewتحذف تقييم العميل الحالي لهذا المنتج فقط.
المنتج. - :add_to_wishlistتحتاج عميلًا مسجلًا، وتنشئ قائمة المفضلة إذا لم تكن موجودة. - :submit_reviewتتحقق
- :add_to_cartتتحقق من الكمية، ثم تطلب من CartControllerإضافة

رسالة قصيرة في الجلسة ثم يعيد التوجيه إلى صفحة المنتج؛ هذا يمنع إعادة تنفيذ النموذج إذا عمل المستخدم تحديثًا للصفحة.
قبل تنفيذ عمليات POST، يقارن الكود رمز CSRFالمرسل برمز الجلسة باستخدام hash_equals().بعد نجاح العملية، يحفظ

الإهانات أو اللغة المسيئة. إذا كانت خدمة Geminiغير متاحة، لا يحفظ الكود التقييم في هذه العملية ويعرض رسالة خطأ.
التقييم من 1إلى 5، والنص محدود الطول. قبل الحفظ، يرسل ReviewModerationControllerالنص إلى Geminiليكتشف

5.إنشاء الحساب وتسجيل الدخول

تسجيل حساب بكلمة مرور

من الاسم والبريد وطول كلمة المرور. ثم يستدعي Customer::register()، والتي تحفظ كلمة المرور كـ hash:
register.phpيتحقق

```
$hashedPassword = password_hash($password, PASSWORD_DEFAULT);
```

الموقع لا يحتاج أن يخزّن كلمة المرور الأصلية. عند نجاح التسجيل، ينشئ جلسة للعميل ويحوّله للصفحة الرئيسية.

تسجيل الدخول بكلمة مرور

login.phpيبحث عن الحساب بالبريد، ثم يقارن كلمة المرور المدخلة بالـ hashالمحفوظ:

```
password_verify($password, $customer['password_hash'])
```

نشطًا، يجدّد معرّف الجلسة (session_regenerate_id) ويضع customer_idوcustomer_nameوuser_roleفي الجلسة.
إذا نجح التحقق وكان الحساب

تسجيل الدخول بحساب Google

تدفق Googleموزّع على ملفين:

ثم يربط حساب Googleبحساب موجود بالبريد أو ينشئ عميلًا جديدًا. 4.ينشئ جلسة العميل ويعيده للصفحة التي كان يريدها.
من ،stateويبدّل authorization codeبرمز وصول، ثم يطلب ملف المستخدم من Google. 3.يتأكد من البريد الموثق،
google-login.php .1ينشئ stateوcode_verifierعشوائيين ويحوّل المستخدم إلى google-callback.php .2 Googleيتحقق

code_challenge وcode_verifier جزء من PKCE، وstate يساعد على رفض callback لم يبدأ من جلسة المستخدم الحالية.

الإعدادات السرية تأتي من Config/google-oauth.local.php؛ لا تضع Client Secret في صفحات الموقع أو JavaScript.

6. كيف تعمل السلة وحجز المخزون؟

تُحفظ في جلسة PHP، لكن المخزون يُخصم من قاعدة البيانات عند الإضافة. في Model/Cart.php تسير العملية تقريبًا هكذا:

```
$db->beginTransaction();
$product = $db->run_query(
    'SELECT stock_quantity FROM products WHERE id = ? FOR UPDATE',
    [$productId]
)->fetch();

//
$db->run_query(
    'UPDATE products SET stock_quantity = stock_quantity - ?
     WHERE id = ? AND stock_quantity >= ?',
    [$quantity, $productId, $quantity]
);
$db->commit();
```

صف المنتج مؤقتًا خلال المعاملة، حتى لا يخصم طلبان آخر وحدات المنتج في نفس اللحظة. إذا فشل التحقق، يعمل rollBack(). يقفل FOR UPDATE

السلة حُصمت فعليًا؛ أضيف هذا الحقل بواسطة migration في Model/migrations/20261031_cart_stock_reservations.sql. أو حذف المنتج أو تفريغ السلة، يعيد الكود الكمية المحجوزة إلى المخزون. stock_reserved_quantity يوضح كم وحدة من عنصر عند تقليل الكمية

الملف: Cart.php

7. ماذا يحدث عند إتمام الشراء؟

نموذج عنوان التوصيل والهاتف وطريقة الدفع. عند إرساله، يرسل JavaScript البيانات إلى checkout_process.php، الذي يحسب: checkout.php يعرض

```
-       +       5% +       2
```

والحد الأدنى للطلب. بعدها ينشئ سجل الطلب، وعناصر الطلب، ويسجل إشعارًا للإدارة، ثم يفرغ السلة ويرجع JSON للواجهة. إذا كان هناك كوبون في الجلسة، يجلب الكود بياناته ويتحقق من نشاطه وتاريخ صلاحيته

من قاعدة البيانات والخادم، وأن يُرفض الطلب إذا لم يوجد عميل مسجل، مع التحقق من CSRF والمخزون ضمن معاملة واحدة. إذا لم توجد جلسة. لذلك هذا الملف يحتاج مراجعة أمان قبل استخدام الموقع علنًا: يجب أن يؤخذ السعر والكمية = customer_id المرسلة من المتصفح ويستخدم السعر المرسل في الحساب. كما يحتوي على قيمة افتراضية 1 والسعر من بيانات POST ملاحظة مهمة عن التنفيذ الحالي: checkout_process.php يقرأ product_id والكمية

الملفات: orders.php، checkout_process.php، checkout.php

8. الكوبونات والتقييمات

جديدًا، ويبدّل حالته أو يحذفه. الكوبون يحتوي نوع خصم (percentage أو fixed) وقيمة وحدًا أدنى وتاريخ انتهاء وحد استخدام. CouponController يقرأ الكوبونات النشطة وغير المنتهية، يتحقق من الكود، ينشئ كوبونًا

الخصم من بيانات الكوبون المخزنة في قاعدة البيانات، وليس فقط من نص الكود المعروض للمستخدم.
صفحة السلة أو الدفع تحتفظ بالكوبون المطبق في الجلسة. وعند إتمام الطلب، يحسب checkout_process.php قيمة

قيد فريد في قاعدة البيانات يمنع العميل من إنشاء أكثر من تقييم واحد للمنتج. الكود يحدّث التقييم السابق إذا كان موجودًا. التقييم مرتبط بمعرّف العميل والمنتج، ويوجد

9.كيف تعمل لوحة الإدارة؟

أن الجلسة تحتوي admin_id وأن user_role تساوي admin. أما routing.php فيحوّل غير المسجل إلى صفحة دخول الإدارة. قبل تنفيذ صفحات الإدارة، Config/admin_guard.php يفحص

في إدارة المنتجات:

SQL. الصور تمر عبر ProductImageController الذي يفحص نوع الملف الفعلي وحجمه ومحتواه، ويولّد اسمًا عشوائيًا قبل حفظه. من 3. CSRF يتحقق ProductController من الاسم والسعر والمخزون والتصنيف. 4. يستدعي ProductRepository لإجراء 5. 1. يقرأ النموذج العملية المطلوبة: إنشاء أو تعديل أو تفعيل أو تعطيل. 2. يتحقق

تعطيل المنتج يغيّر is_active بدل حذف السجل نهائيًا؛ لهذا يمكن إخفاؤه من الكتالوج ثم إعادته لاحقًا.

Overview تنفذ استعلامات تجميعية للإيراد وعدد الطلبات والعملاء النشطين والمخزون المنخفض، ثم تعرضها كأرقام ورسوم. صفحة

الملفات: ProductRepository.php، ProductController.php، admin-products.php، admin_guard.php

10. PC Builder وفحص التوافق

من قاعدة البيانات وتحولها إلى JSON داخل builder.js. HTML يقرأ القائمة ويملأ قوائم التصنيف والمنتج. عند اختيار قطعة: الصفحة تحمّل قائمة المنتجات

واحدة لكل slot مثل CPU أو GPU. - يحسب مجموع الأسعار. - يرسل معرّفات القطع المختارة إلى Controllers/compatibility.php. - يعرض اسمها وسعرها ومخزونها. - يسمح بتثبيتها مرة

CompatibilityChecker يجلب المواصفات من جدول product_specs، ويجري قواعد محددة مثل:

- طول GPU مع الحد الأقصى للكيس. - ارتفاع المبرد مع حد الكيس ومقبس CPU. - تقدير قدرة مزود الطاقة من قيم TDP المتوفرة. - مقبس CPU مع مقبس اللوحة الأم. - نوع RAM مع دعم اللوحة الأم.

ناقصة تكون النتيجة unknown. نجاح فحص واحد لا يعني أن الجهاز كله مضمون التوافق؛ الكود نفسه يوضح أن هذه فحوص أولية. إذا كانت المواصفة

GLB ووضع القطع في مشهد ثلاثي الأبعاد. الإحداثيات والحجوم تقريبية، لذلك المشهد للعرض وليس قياسًا هندسيًا حقيقيًا. أما builder-3d.js فيستخدم Three.js لتحميل ملفات

الملفات: CompatibilityChecker.php، builder-3d.js، builder.js

11.صفحة التوصيات وفحص Gemini

للعميل بإدخال مكونات جهازه الحالية كلٌّ في حقل اختياري منفصل. هذه المكونات لا يلزم أن تكون منتجات موجودة في المتجر. الصفحة تطلب ثلاثة أشياء إلزامية: فئة القطعة المطلوبة، والميزانية، واسمح

من الفئة المطلوبة والتي لا تتجاوز الميزانية. لكل مرشح يضيف مواصفاته من product_specs ووصفه وسعره ومعلومات التقييم. الـ Controller ينفذ أولًا استعلام SQL ليجمع المنتجات النشطة والمتوفرة

بعدها يبني طلبًا إلى Gemini عبر generateContent، ويرسل:

- القطع التي كتبها العميل كما هي. - قائمة المرشحين التي جاءت من قاعدة البيانات فقط. - المواصفات المسجلة لكل مرشح.

ملاءمة. الكود يتحقق أن كل product_id أرجعه Gemini موجود فعلًا في قائمة المرشحين قبل عرضه، ثم يرتب المتوافق أولًا. كل مرشح وإرجاع JSON فيه حالة التوافق (compatible أو incompatible، أو unknown) وسبب مختصر، وفحوص تفصيلية، ودرجة تعليمات Gemini تطلب تقييم

ناقصة، قد يعيد الذكاء الاصطناعي unknown بدل ادعاء التوافق. صفحة التوصيات تعرض مؤشر تحميل أثناء انتظار رد الخادم. مفتاح Gemini يُقرأ من متغير البيئة GCP_API_KEY أو من Config/gemini.local.php. إذا كانت المواصفات في قاعدة البيانات

الملفات: gemini.local.php، RecommendationController.php، recommendation.php

12.أجزاء الأمان المتكررة

فحص الأرقام والبريد والسعر والمخزون قبل الاستعلام أو الحفظ. - المخزون: حجزه وتحريره ضمن معاملات قاعدة البيانات.
المستخدم ونوعه. - ترميز HTML: استخدام htmlspecialchars() عند طباعة قيم المستخدم في HTML. - تحقق مدخلات:
التسجيل و password_verify() عند الدخول. - جلسات وصلاحيات: customer_id و admin_id مع user_role يحددون
- CSRF: نماذج POST تنشئ token في الجلسة وتقارنه بواسطة hash_equals(). - تجزئة كلمة المرور: password_hash() عند
- Prepared statements: تمرير قيم SQL عبر run_query() ومعاملاته.

عملية جديدة يجب اتباع نفس النمط وعدم الاكتفاء بالتحقق في JavaScript؛ التحقق الأساسي يجب أن يكون في PHP والخادم.
هذه الآليات موجودة في عدة ملفات، لذلك عند إضافة

13.جداول البيانات التي يمر بها الاستخدام

المحفوظة. - reviews: تقييم العميل للمنتج. - notifications: رسائل الإدارة عن أحدا ث مثل الطلب الجديد.
payments: الطلب وعناصره والدفع. - coupons: أكواد الخصم وشروط استخدامها. - wishlists و wishlist_items: المنتجات
القطع التي يستخدمها PC Builder والتوصيات. - carts و cart_items: بنية السلة ومخزونها المحجوز. - orders و order_items
products: الفئات والمنتجات والسعر والمخزون والنشاط. - product_images: مسارات صور المنتجات. - product_specs: مواصفات
- customers: بيانات العميل وكلمة المرور المجزأة أو معرّف categories و Google.

داخل Database.sql الموجود بالمشروع؛ لذلك عند إنشاء قاعدة جديدة يجب إضافة/استيراد مخطط هذا الجدول وبياناته أيضًا.
product_specs موجود في قاعدة البيانات الحالية وفيه مواصفات مستخدمة بالفحص، لكنه غير معرّف
المخطط الأساسي في Database.sql، وترحيل حجز المخزون في 20261031_cart_stock_reservations.sql. جدول

الخلاصة: مثال تتبع طلب شراء

ويحدّث الكوبون ويفرغ السلة. بهذه الطريقة تستطيع تتبع كل ميزة من نقرة المستخدم إلى استعلام SQL الذي يحفظ نتيجتها.
والضريبة والتوصيل. عند checkout، يرسل النموذج بيانات الطلب إلى checkout_process.php، الذي ينشئ الطلب وعناصره
الكمية من MySQL ثم يحفظ بيانات السلة في الجلسة. صفحة السلة تعيد قراءة السعر والاسم من المنتجات وتحسب المجموع
للسلة« من صفحة منتج، يتحقق product.php من POST و CSRF والكمية، ثم يستدعي CartController. ينفذ Cart معاملة تحجز
عندما يضغط العميل »إضافة

ملحق: الشرح والكود الكامل لكل الملفات البرمجية

أدرجت ملفات exampleالآمنة بدلًا منها. بقية الأكواد منسوخة كاملة كما هي من ملفات المشروع وقت إنشاء هذا الدليل. google-oauth.local.phpو gemini.local.phpحتى لا يظهر Client Secretأو Gemini API keyداخل مستند يمكن مشاركته. إعدادات الويب الموجودة بالمشروع، مع وصف وظيفة كل ملف قبل الكود. لم أضمّن ملفات البيانات المحلية الحساسة الجزء السابق شرح سير الوظائف الرئيسية. هنا أدرجت النص الكامل لكل ملفات PHPو JavaScriptو CSSو SQLوملفات

View/Pages/wishlist.php

وظيفته: عرض منتجات قائمة المفضلة وإزالة المنتجات منها.

الكود الكامل:

```
<?php
if (session_status() === PHP_SESSION_NONE) { session_start(); }
require_once __DIR__ . '/../../Config/DBconnection.php';
require_once __DIR__ . '/../../Controllers/CartController.php';

/* ============================================================
   Floating parts — CPU / RAM / Motherboard / SSD
   "Ring" technique: one big invisible ring spins around the
   center of .rig; each part sits at a fixed clock-position
   (12 / 3 / 6 / 9 o'clock) ON that ring, so the ring's spin
   carries it around in a circle. Each part then spins the
   OPPOSITE way, at the same speed, so its own emoji + label
   stay upright instead of tumbling. No translateX, no CSS
   custom properties inside @keyframes — just two plain
   rotations, which is about as bulletproof as CSS gets.
   ============================================================ */
/* Positioning for these two is now fully computed and applied by
   JS every animation frame (see the <script> at the bottom of the
   hero section) — that sidesteps any page CSS that was stomping on
   position/transform here. These rules are just safe fallbacks in
```
