2. Google OAuthوتسجيل الدخول العادي

Config/google-oauth.phpيقرأ ملف google-oauth.local.phpإن وجد، ويعيد القيم اللازمة دون طباعة السر.
زر Continue with Googleفي View/Pages/login.phpيبدأ من .google-login.phpالإعداد

بداية OAuth: إنشاء stateوPKCE

يوجه المستخدم إلى Googleمع openidو emailو profile. بعد موافقة المستخدم، تعيد Googleالمتصفح إلى redirect_uri.
google-login.phpينشئ stateعشوائيًا لمقاومة CSRF، وcode_verifierمع SHA-256 challenge. يخزن القيم في Sessionثم

```
$state = bin2hex(random_bytes(32));
$verifier = rtrim(strtr(base64_encode(random_bytes(64)), '+/', '-_'), '=');
$_SESSION['google_oauth_state'] = $state;
$_SESSION['google_oauth_verifier'] = $verifier;

النموذج، action=submit_reviewيتحقق الخادم من الجلسة و CSRFوالتقييم بين 1و 5،وأن التعليق غير فارغ ولا يتجاوز 2000حرف.
واجهة المراجعات موجودة في View/Pages/product.php. عند إرسال

بيانات لا تعليمات، وأن التقييم السلبي العادي مسموح، بينما الألفاظ النابية والتهديد والتحرش والإهانات غير مقبولة في أي لغة.
ينشئ ReviewModerationControllerويطلب isAcceptable(comment). يرسل النص إلى Geminiمع تعليمات صريحة بأن النص

هذا المعنى يطابق المطلوب: القطعة الحالية قد تكون خارج

5. routing.php: الموجّه والحماية

الصفحات إلى ملفات PHP. page قيمة رابط لا تتحول مباشرة إلى مسار ملف؛ لذلك لا يستطيع المستخدم تمرير اسم ملف عشوائي.
View/Layout/routing.php يبدأ الجلسة، يثبت معالجات أخطاء، ثم يبني قاموسًا ثابتًا من أسماء

```
$routes = [

صفحة checkout تحول الزائر إلى login وتحفظ post_login_page=cart. صفحة account تتطلب العميل وتعيد فحص أن الحساب نشط.

كل اسم يبدأ -admin ما عدا admin-login يحتاج

نصية صغيرة للتحقق الفوري من الكوبون. الأخطاء العامة تسجل في error_log وتعرض صفحة خطأ بدل تفاصيل الاستثناء للمستخدم.
قبل عرض صفحة products ينشئ CatalogRepository و CatalogController ويقرأ الفلاتر. يوجد أيضًا check_code كاستجابة

عند حذف تصنيف مرتبط بمنتجات، قيد قاعدة البيانات قد يرفض الحذف؛ يعرض الكود رسالة تطلب نقل المنتجات

admin-overview يستعمل getAll نفسه لعرض ملخص التصنيفات وصورها وعدد المنتجات، مع رابط لإدارة التصنيفات.
